

WEB115D Practical Test

Dear Student,

- Do the activities below by following all instructions
- You can start from scratch or use the attached files to continue and reach the desired results.

Upon completion,

1. You will/should have a folder of your website containing all your files named with your student number
2. Zip that folder(right click, press Send to Compressed (Zipped) folder)

Build a single-page Personal Portfolio website that demonstrates:

- HTML5 structure & semantics,
- CSS styling,
- Modern page layout (Flexbox or Grid),
- Graphic design with CSS (backgrounds, shadows, borders, gradients, hovers),
- Lists (ordered, unordered, description),
- Sidebar.

Scenario

Create a portfolio for yourself that showcases “About Me” and “Projects”, plus useful quick links in a sidebar. Do not use the information on the demo website displayed to you.

Requirements (What to Build)

A) HTML5 Structure & Content (20 marks)

- Correct HTML5 boilerplate: `<!DOCTYPE html>`, `<html lang>`, `<head>`, `<meta charset>`, `viewport`, `<title>`.
- Use semantic sections: `<header>`, `<nav>`, `<main>`, `<section>`, `<footer>`.
- Navigation as a list in the header linking to in-page sections (anchors).
- Sidebar (`<aside>`) containing: “Quick Links” (internal anchors + 1–2 external links that open in a new tab).
- A short skills list.
- Lists section in main content: One ordered list (e.g., learning goals),
- One unordered list (e.g., hobbies),
- One description list (define HTML, CSS, JavaScript).
- Projects section: at least 3 project entries (titles + short descriptions; placeholder images allowed)

B) CSS Basics & Consistency (20 marks)

1. Use an external stylesheet.
2. Set a base font (system font or a Google Font), line height, and consistent color palette.
3. Demonstrate the box model: margins, padding, and at least one visible border.
4. Style navigation states (hover at minimum).

C) Page Layout (Flexbox or Grid) (25 marks)

1. Use Flexbox or CSS Grid to create a two-column layout: sidebar + main content.

The layout must be responsive: Desktop: sidebar and main in two columns,

Demonstrate centering and alignment where appropriate.

D) Graphic Design with CSS (25 marks)

1. Apply a background treatment (e.g., gradient for the header or page section).
2. Use rounded corners and box shadows on at least one content card (e.g., project tiles).
3. Include at least one hover effect (links or cards).
4. Use a subtle transition (e.g., on hover state) for polish.

Deliverables (when you finish writing)

- index.html, style.css, and any assets inside a zipped folder;

Marking Rubric

This test will be marked as follows. Area	Criteria	Marks
A. HTML Structure & Content	Boilerplate; semantic tags; header/nav; sidebar/aside; lists (OL/UL/DL); projects section with images/titles/descriptions	20
B. CSS Basics	External CSS; font & color scheme; box model; nav/link styling	20
C. Layout	Flexbox/Grid for two-column layout; responsive behavior; alignment	25
D. Graphic Design	Background (gradient/image); rounded corners; shadows; hover + transition	25
F. Quality & A11y	Clean code, comments, alt text, heading hierarchy, cross-browser check	10
Total		100
